SUMMARY

Full Stack Developer with proven experience building scalable, user-centric applications across web and XR. Strong in React/TypeScript, Node.js/Express, Firebase/AWS, and real-time systems (WebSockets). Passionate about performance, clean architecture, and shipping useful products.

EDUCATION

Vancouver Community College, Vancouver, BC	Vancouver, BC
Diploma in Computer Systems Technology	Jun 2025
Indian Institute of Technology, Delhi	New Delhi, India
Bachelor of Technology in Textile Technology	May 2020

PROJECTS

Proactively (AI Business Chatbot) <i>React TypeScript Node.js Express Firebase Auth/Firestore Google Gemini API</i> A web app that guides entrepreneurs from raw ideas to structured business models through conversational AI. - Designed an AI agentic workflow using Google Gemini API with context-aware memory, enabling the chatbot to capture user intent and build coherent business models. - Integrated prompt-driven reasoning and validation steps, improving clarity and reliability of AI responses. - Built a modular React/TypeScript frontend with Context API and TanStack Query for responsive, real-time interactions. - Developed a secure Node.js/Express backend with Firebase Auth (JWT) and Firestore to persist conversation history and support scaling. - Delivered an analytics dashboard (Chart.js) to surface engagement patterns and guide product decisions. - Optimized serverless deployment and CI/CD (GitHub Actions + Firebase), improving release velocity and runtime efficiency. - Collaborated with users in testing and iterative design to refine conversation flows and UX, improving onboarding and end-to-end completion.	
Fursight (AI Content Automation Platform) <i>React TypeScript Node.js Express Firebase Auth/Firestore Qdrant Google Gemini 2.5 Flash API OpenAI Embeddings Shopify GraphQL API Pinterest API v5</i> A SaaS that automates content creation for e-commerce merchants by ingesting research docs and generating SEO-optimized blogs and Pinterest pins with draft management. - Architected a semantic search pipeline with OpenAI text-embedding-3-small + Qdrant, enabling context-aware generation from PDFs/URLs (≥0.7 relevance). - Engineered a multi-tenant RAG system with Gemini 2.5 Flash, with prompt engineering and JSON parsing + retry for 95%+ reliability. - Built a modular React/TypeScript SPA (shadcn/ui, TanStack Query, Wouter) with dark mode and role-based UI (owner/student/helper). - Developed a scalable Node.js/Express backend with Firebase Auth (JWT), Firestore, and tenant isolation; integrated BullMQ for jobs and 50MB uploads. - Integrated Shopify Admin GraphQL + Pinterest API v5 for direct publishing with secure credentials, preserving SEO metadata and supporting CSV bulk ops. - Optimized processing via memory-efficient chunking (~4k chars, 1k-token overlap), batch embeddings, and generator-based streaming to handle large inputs.	
AR Furniture Showcase <i>Unity AR Foundation Blender C#</i> An AR app for realistic virtual furniture placement with accurate scaling, occlusion, and lighting. - Modeled and optimized 3D assets in Blender with custom shaders and textures for realism while maintaining performance. - Integrated ARKit/ARCore via AR Foundation with plane detection, anchoring, and persisted placement across sessions. - Designed intuitive UI for selection, transform (scale/rotate), and material presets with undo/redo. - Optimized runtime via asset bundling, LOD models, and profiling to ensure smooth interactions on mid-range devices.	
NaviGo (Indoor Navigation System) <i>React Material-UI Node.js Express Firebase Auth/Firestore A* Algorithm Device Orientation API</i> A real-time indoor navigation web app for large complexes providing turn-by-turn directions via QR calibration and device sensors. - Engineered an optimized A* pathfinding algorithm with a 1.5 m neighbor-distance threshold over 1,400+ nodes to constrain routes to walkable corridors (no diagonal shortcuts). - Built a canvas-based map renderer with animated paths, coordinate transforms, and gesture controls (zoom/pan/pinch) achieving smooth 60 fps guidance. - Integrated compass/PDR using DeviceOrientationEvent/DeviceMotionEvent with iOS permission flows and calibration for ~19.5° magnetic declination and 32° map rotation. - Implemented direction-based route chunking (~15 m segments) for step-by-step navigation with Previous/Next controls and context-aware map windows. - Added Firebase Authentication (email/password, Google OAuth) and Firestore trip history (timestamps, distance, completion); configured CI/CD to Pages (FE) and Render (BE) with Vite proxy and CORS.	
Collaborative Note-Taking Platform (Real-time) <i>React Node.js Express Socket.IO Firebase Auth AWS DynamoDB Chrome Extension (Manifest V3)</i> A multi-platform note-taking app enabling sub-second real-time collaboration across web and Chrome extension with instant sync. - Architected room-based broadcasting with Socket.IO enabling multiple users to edit shared notes with sub-second synchronization across clients. - Implemented role-based access with Firebase JWT and custom middleware; email-based invitations and sharing stored in DynamoDB. - Unified authentication/API layer for React web app and MV3 Chrome extension, avoiding code duplication and enabling consistent UX. - Designed RESTful endpoints atop DynamoDB with scan-and-filter patterns for collaborative access and low-latency reads/updates. - Built a unified WebSocket server by combining Express HTTP and Socket.IO on a single port, simplifying infra and ensuring reliable event propagation. - Secured endpoints with Firebase Admin SDK token verification to prevent unauthorized note access and collaboration features.	
Co-Founder, Proactively AI - Co-building an AI SaaS for interactive business-plan creation; aligned roadmap, UX and documentation. - Architected Firebase-based backend (Auth, Firestore, Storage) and Gemini integrations (Flash Lite/Pro/TTS). - Implemented Stripe subscriptions with tiered access, coupons, invoicing; CI/CD via GitHub Actions.	Mississauga, ON · Remote Jul 2025 – Present
Web Developer, Mori Cat - Maintained the Moricat site, improved SEO and performance; integrated Shopify stores and analytics. - Built in-house automation tools for product/blog sync and Pinterest/Shopify workflows.	Kingston, ON · Remote Oct 2024 – Present
Head of Operations, Travvir - Improved customer retention by 15% via feedback loops and targeted personalization. - Managed Google Ads end-to-end; increased conversions by 20% while reducing CPA.	Noida, India · Hybrid Sep 2019 – Jun 2023
Operations Head, HopeQure.com Led digital marketing (SEO/SEM/SMM), site design, local search, and ad placement to grow reach.	Noida, India Jul 2018 – Jun 2019
Business Development Intern, Nestkeys Infratech - Mentored 34 trainees; built training materials/metrics to hit premium collection targets. - Partnered with senior advisors to refine pitches, boosting trainee performance and CX.	Gurugram, India Jun 2017 – Aug 2017
Student Volunteer, AIESEC in Malaysia — University of Nottingham Malaysia Campus Led English/Math workshops for NGO students; supported community fundraising strategies.	Malaysia Dec 2014 – Jan 2015

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, C++, Java, C# | Frameworks: React.js, Node.js, Express, Spring Boot
Cloud/Tools: Git, Docker, AWS (Lambda, DynamoDB, S3), Firebase | Databases: MongoDB, PostgreSQL, Neo4j, Firestore
XR/AR: Unity, Unreal Engine, AR Foundation, TikTok Effect House | AI/ML: Google Gemini API
